ATTIVITA' DI RICERCA

Currently most of his research is focused not only on the aspects of plastic-reconstructive facial district, but also on the study of facial aging. A constant commitment, aimed to develop and codify new methods and surgical techniques, for a harmonious and natural rejuvenation. In this context, Dr. Pascali has devised new surgical techniques, used throughout the world and published in the most prestigious international journals. He devotes much of his clinical activity in the treatment of secondary surgery, with particular interest to the correction of the results of previous surgery of the orbital eyelid region and the nasal pyramid.
